Getting Started with SAP Activate in Roadmap Viewer
What is a SAP Activate Methodology Implementation Roadmap?

A SAP Activate Methodology Implementation Roadmap aims to assist by providing implementation project teams with a recommended list of deliverables (the "what") in each phase, a process description in the form of tasks (the "how"), and accelerators (such as templates, examples, guides and web links) in a user friendly format - helping implementations to run simple.

In software implementation, the methodology (often referred to as the Implementation Roadmap) represents a structured approach to the software implementation process. It allows work to be split into distinct phases, with deliverables and tasks, that help project teams to better plan, execute, and manage their implementation project.

Follow along in SAP Roadmap Viewer at: https://go.support.sap.com/roadmapviewer/
Phases - Phases are stages of the project. At the end of each phase, a quality gate exists to verify the completion of the deliverables.

Deliverables - A deliverable is an outcome that is delivered during the course of the project. Several deliverables are included within a work stream.

Tasks - A task is work to be performed. One or several tasks comprise a deliverable.

Accelerator - An accelerator is a document, template, or a web-link that helps a consultant, a customer, or the PM perform the task and complete the work faster or with less effort.

Workstreams - A workstream is a collection of related deliverables that show time relationships within a project and among other streams. Streams can span phases and are not necessarily dependent on phase starts and end.

More filter groups — Different road maps provide additional groups to filter the content (e.g. Services in the transition to SAP S/4HANA road map)
To Log On, click the “Log On” button to be prompted to log on and enter your credentials. Once logged on, your credentials will allow you to access the content relevant to your access level. To Log Out click and choose the “Log Out” option. This will bring you back to the public view. To Search for content within Roadmap Viewer select and enter keywords.
Types of Roadmaps:

1. **General**
   Provide framework and approach for running a project across a range of solutions.

2. **Product Specific**
   Provide prescriptive guidance for implementation of a specific product.
Accessing Specific Roadmaps

Click on the specific Roadmap Type you would like to View
Browse the list of available roadmaps for the selected roadmap type
Select one of the roadmaps

Solution Specific

Click here to return Home
Overview
Browse a brief description of the roadmap and its different phases

Content
Click on the Content tab to access the structure of the selected roadmap
Content: Filtering

Filter logic:

- When filters have been set in one filter group (Phases; Workstreams; …) only: Content is displayed if it has been assigned to one of the selected filters within this group.
- When filters have been selected in multiple filter groups: Content is displayed only if it meets the filtering selection of all groups.

All content is visible when no filter tag has been selected (Clear All).

Hide / show the left-hand filtering pane.
Navigation to Deliverables and Tasks

Navigate back to the upper level of the content structure

Navigate to the previous / next deliverable within the same phase

Navigate to the previous / next task within the same deliverable

Use bread-crumbs navigation
You can define deliverables and tasks as favorites (if you are signed in to Roadmap Viewer with your personal user).
Shortcut – Accelerators

Click on the Accelerators option to view all accelerators relevant to roadmap.
The Accelerators will automatically be grouped by Phase.
Use filtering to select accelerators assigned to specific workstreams or services.

When a roadmap has a project plan you can download, click here Download Project Plan, to download it. The project zip file, containing an XLM and XLS file, can be saved locally. The XML can be uploaded into SAP Solution Manager or the XLS file can be used at the project team’s discretion.
