Focused Build for SAP Solution Manager
Agile project lifecycle management

David Birkenbach, SAP
December, 2019
Requirement To Deploy with SAP Solution Manager

Focused Build Overview

Capabilities and features in Focused Build

Agile methodology with Focused Build

Enable Focused Build
Requirement To Deploy with SAP Solution Manager
The Application Lifecycle Management Product Portfolio of SAP

SAP Solution Manager
available for hybrid customer solutions

Focused Run
available for hybrid customer solutions

SAP Cloud ALM
available for SAP S/4HANA Cloud

Fully integrated ALM suite for on-premise-centric medium and larger customers

Application Operations for service providers and large / very large customers

Starting with the Implementation portal for cloud-centric small and medium customers
SAP Solution Manager 7.2 Key Value Chains

Portfolio to Project
- Portfolio Management
- Project Management

Requirement to Deploy
- Demand
- Design
- Development
- Test
- Deploy

Detect to correct
- Monitor
- Incident
- Problem
- Optimize

Request to Fulfill
- Service Catalogue
- Service Request
- Service Fulfillment
Build with SAP Solution Manager

For SAP and non-SAP
Covers SAP Business Suite, S/4HANA, Concur, Ariba, SuccessFactors, … and non-SAP solutions

On-premise, Cloud, Hybrid
Supports functional tests for on-premise, cloud and hybrid solutions

Integration
Seamlessly integrates with all capabilities, supports waterfall and agile development approaches, including Enterprise DevOps

All under one roof
no integration setup and ongoing data replication required

Plan & Control
✓ Build Project Management
✓ Financial Project Management
✓ Effort Planning & Time recording
✓ Resource Management
✓ Work Break Down Structure
✓ Project reporting

Design & Build
✓ Graphical modeling
✓ Process management
✓ As-is, reference, and to-be landscapes
✓ Connection to run-time and design-time
✓ Requirements management
✓ Solution Readiness Dashboard

Test
✓ Manual Tests
✓ Automated Tests for SAP
✓ Test automation framework
✓ Test Data
✓ Change Impact Analysis
✓ Test Planning
✓ Test Analytics

Deploy
✓ Transport control
✓ Change traceability
✓ Deployment management
✓ Release planning
✓ Retrofit
✓ Quality gate management
✓ Change Analytics & Diagnostics

Optimizing Digital Business Transformation with SAP Solution Manager

The Mission:

- SAP Solution Manager is the tool for Application Lifecycle Management and for Service and Support to help customers building and running SAP solution landscapes.
- ALM tools and solutions are supporting project delivery teams to build the target business processes from Requirement to Deploy (R2D).
- We are providing SAP Solution Manager 7.2 plus Focused Build as a preconfigured agile approach to build solutions in an on premise or hybrid landscape.

The benefits:

- Using SAP Solution Manager in SAP projects is leveraging some crucial delivery success factors:
  - Reduced time to value by using Best practices content and processes (Activate & Modell Company)
  - Improve efficiency by automation repetitive tasks
  - Standardized Delivery for quick onboarding
  - Assured quality with controlled project activities
  - Better Predictions by real time project transparency
  - Higher Customer satisfaction through early results and agile adoptions
  - Seamless transition to operations with one platform to support the SAP application lifecycle
Three Different Change Paces in Requirement to Deploy

**Fix**
- **Trigger**: Business disruption or standard change
- **Scope**: Small
- **Process Impact**: None
- **Approval**: Individual
- **Deployment**: Unbundled on request or bundled with release
- **Time to delivery**: 1 day – 1 week

**Enhance**
- **Trigger**: Improvement request
- **Scope**: Medium
- **Process Impact**: Minimal
- **Approval**: Individual
- **Deployment**: Bundled with release
- **Time to delivery**: 1 month

**Innovate**
- **Trigger**: Transformation projects, new solutions
- **Scope**: Large
- **Process Impact**: Significant
- **Approval**: Pre-Approved
- **Deployment**: Bundled with release
- **Time to delivery**: 3-12 months

SAP S/4HANA with SAP Solution Manager 7.2 – project success criteria

System conversion projects:
- Use the Readiness Check to prepare project
- Use Custom Code Management to clean up

Use the S/4HANA transition roadmap to manage your project

Use SAP Activate and SAP model companies to accelerate your project

Use FocusedBuild to manage your development activities
Focused Build Overview
Focused Build in a nutshell
Focused Build enables SAP Solution Manager for projects

Focused Build for SAP Solution Manager 7.2 as tool, together with SAP Activate as methodology, perfectly support you in innovation projects such as SAP S/4HANA implementations.

Focused Build…

- Is an add-on solution for SAP Solution Manager 7.2 containing preconfigurations for agile project usage.
- Enables you to jump-start SAP Solution Manager for your innovation project.
- Provides best practice content, workflow-supported methodology for all project phases and project transparency about all activities.

SAP’s smart delivery platform to manage implementations end-to-end with Focused Build
Focused Build for SAP Solution Manager

Requirements to Deploy

1. **Prepare**
   - Requirements Management within process models
2. **Explore**
   - Agile development projects: from Sprint to Release
3. **Realize**
   - Modern applications with high usability for all involved roles
4. **Deploy**
5. **Run**

**Role based rollouts**

- Requirements Management within process models
- Agile development projects: from Sprint to Release
- Modern applications with high usability for all involved roles
- Project governance with automated status reporting

**Focused Build** is a turn-key solution to manage agile development projects.
As of **2020**, the usage rights of SAP Solution Manager include SAP Focused Build and Insights – no additional costs

Focused Run remains on SAP price list and SAP Store
What Is Included in Focused Build?

Focused Build

Role-based / Training Units

- Dashboards
- UI5 Applications
- Standalone Enhancements
- 3rd party integration (scrum tools)

Turn-Key Process Configuration and Integration

- Prepare
- Explore
- Realize
- Deploy
- Run

- Portfolio & Project Management
- Process Management
- Requirements Management
- Change Control Management
- Release Management
- Test Suite

:Configurable baseline engines of SAP Solution Manager

: preconfigured and ready to use Focused Build add ons
Why **Customers** love to run their projects with Focused Build?

- **Bridge** business and IT view
- **Save effort** and **shorten duration** for controlled rollout projects
- **Clear project status** with business process context
- **Seamless** solution documentation **handover to operation**
Why **Project Managers** love to run their projects with Focused Build?

- Fulfilling all business process requirements **in time and budget**
- Starting with **Best Practices**
- Immediately available tool for **standardized and agile** processes
- Transparency on current project status
- Efficient processes by **reduced efforts**
Why using Focused Build addon on SAP Solution Manager?

- **Efficient and common** way to manage innovation projects based on SAP Implementation best practices
- Have **full control** about standardized documentation, templates and document status reporting
- **Reduce the tool zoo** in projects with one central and integrated application
- Start with **existing** process descriptions, templates and accelerators.
- **Seamless handover to Operations**

- **Real time transparency** about all activities, issues and risks in your project
- Predictive Project Management based on **KPI driven processes**.
- Integrated Dashboard based on real time data allows **detailed Drill Downs**

- Agile Project Management requires **structured process workflows**
- Managing of Scope changes, risks and issues **protects from unexpected costs and delays**
- **Collaboration** with all partners in a standardized way
- **Early reaction** on unplanned scope extensions and missed due dates
- **Audit prove** traceable Project Management

- Automated processes in project activities **saves time** and avoid process diversity
- Mass processing activities for approval, releasing or status changing **reduce manual effort**
Benefits for all stakeholders

Use of SAP Solution Manager with agile Focused Build approach will be appreciated on each level of project delivery

Program Management
- Transparency
- Measurement
- Best Practices
- Harmonized content - tool – methodology
- Assured quality
- Better Predictions
- Customer satisfaction

Project team
- Guidance
- Content
- Usability
- Automation

Customer
- Reduced time to value
- Improved efficiency
- Business process focus
- Early results
- Smooth Handover to operation
- Stabilized data deployment
- High quality
- One single source of truth
Focused Build in SAP Solution Manager 7.2 is fantastic for Build SAP

Product Highlights

**BPMN modelling based on SAP best practice processes**

**Workflow based SAP UI apps for each project role**

**Test and deployment automations to reduce risks and increase efficiency**

**Real time project transparency with PMO dashboards**
Focused Build in SAP Solution Manager 7.2 is fantastic for Build SAP

Product Highlights

**Focused on Business processes**
- Start with **Best-practice** processes and documentation
- Always up-to-date with SAP´s One Content Cloud
- Integrated **BPMN Process Modelling** capabilities
- Any build activity is always **referenced to a Business process**
- Multilevel library structure for **proper solution documentation**

**Process guidance**
- Proven SAP project experiences have influenced the E2E Focused Build process
- **Automated** test planning, deployment & checks to reduce manual efforts and to avoid errors
- **SAP UI5 based application** assure the adoption and acceptance from project team
- Build what the business needs with **iterated workflow** processes

**Agile**
- Agile release and software engineering with optional **JIRA integration or Scrum Board extension**
- Follow **SAP Activate** based Requirement to Deploy methods
- Continuous feedback & test loops with the business
- Incremental delivery of solution with an **agile Release concept** to manage multiple projects in parallel

**Out-Task**
- **Automated visibility** of solution readiness against due dates to manage risks and exceptions
- Efficient management of **distributed development teams** through packaged work and standardized processes
- Automated real-time dashboards for testing, project management, or deployments **replace spreadsheets**
- Improved **collaboration** and quality assurance with SAP in a standardized project delivery

Transparent Requirements-to-Deploy
Incremental deployment with constant feedback loops with the business

**Releases** synchronize project go lives and ensure continuous delivery and integration.

**Project** to bundle deliverables. Multiple and parallel projects are possible.

**Phases** ending with **Quality Gates**
Short prepare and scope, incremental build

**Waves** ending with **Acceptance** by the business (~ 8 – 12 weeks)

**Sprints** with **Show and Tell** sessions to the business (~ 2 weeks)
Focused Build
Outcome based delivery - constant feedback loops with the business

Ready-to-run, and integrated, tool-supported methodology to manage requirements and software development in large, agile projects.

Value added by methodology & tools

- Automated visibility of solution readiness against due dates, with integrated risk management
- Management of distributed development teams
- Agile release and software engineering with optional JIRA integration
- Automated test planning, change & release management to support continuous delivery & integration and DevOps
- Full integration of requirement, project, process, change, release and test management
Transparent Requirements to Deploy with Focused Build

Unprecedented Transparency
Real time PMO Dashboard for Solution Readiness

Unprecedented Usability
Simple efficient user interfaces for Build Teams

Excel free automated reporting

Understand requirement, process context and due dates

Drag & drop your specs or test cases into the work package

Manage workflow

Test Suite Dashboard
Capabilities and features in Focused Build
Focused Build capabilities & facts

Requirement to Deploy (R2D)
- Process Management
- Project Management
- Deployment & Release Management
- Requirement & Build Management
- Test Suite
- External Integrations
- Dashboards

Standalone functionalities
- Standalone features for Charm
- Standalone features for Testing
- Standalone features for ITSM

- Focused Build is using functionalities which base on the standard functionalities of SAP Solution Manager 7.2
- Focused Build can be installed and used additionally to already used scenarios in SAP Solution Manager.
- Focused Build brings additional features, UIs and dashboards in each of the scenarios which are only available with the Focused Build stack.
- Focused Build-only functionalities can not be used standalone, with the exception of the features in Test Suite.
- There are several Standalone features which can be used independent from R2D to support single standard functionalities of SAP Solution Manager. Nevertheless they need the installation of ST-OST200
Project Management in Focused Build
Which PMI knowledge areas are covered by Focused Build?

With the focused solution Requirements-to-Deploy we focus strictly on the **build** process and solution readiness.

*) Cost and Procurement Management as well as HR can be added using ITPPM standard.
Project Management in Focused Build
Project Management – SAPUI5 app
Discover and download SAP Best Practices content
SAP Solution Manager 7.2

Process models
- Define your solution by selecting from a SAP Best Practices process library complete with process models, process diagrams, test scripts, and links to executables, such as SAP Fiori apps, in your solution.

Configuration
- Understand and document how SAP Best Practices are configured in the configuration guides and activate or adjust the configuration in your solution.

Project guidance
- Import (WBS) templates based on SAP Activate to understand the typical project tasks and prepare your own projects.

Import SAP Best Practices easily and at no extra cost in the Solution Administration app in your SAP Solution Manager 7.2 system.
SAP Best Practice Processes
Perfect Fit SAP S/4HANA

Show and tell
1. Import and scope SAP S/4HANA best practices into SAP Solution Manager
2. Review the process flows
3. Execute the SAP S/4HANA innovations hands-on
4. Document the result of this fit/gap analysis

Identify your fit/gap to SAP S/4HANA based on best practice content. SAP Solution Manager facilitates the requirements-to-deploy process to implement the needed changes.
Implementation Content
 Authored, delivered and ready for consumption in SAP Solution Manager

SAP Model Companies
- SAP Model Companies are provided by your system integrator (SAP or Partner)*.
- 15 SAP Model Companies available – more to come
- Partner model companies available – more to come

SAP Activate
- SAP Activate comes with SAP S/4HANA
- 8 Solution Packages – more to come

Available as a ready to run appliance, including all applications, configuration, sample data. Model Companies provide end-to-end scenarios based on SAP Activate processes and IoT show cases.

*) Needs to be licensed by partners, coupled with SAP Value Assurance
Use SAP process content
The SAP Model Company service building blocks

SAP Best Practices
methodologies and step-by-step approaches combining knowledge of customer projects

SAP Solution Manager Documentation
Documentation of end-to-end business processes, control, monitoring and transport for the landscape

Engineered Services
Technology / Functional
accelerators for fast on-boarding and adoption

Pre-Configured End-to-End Processes
LoB and Industry specific end-to-end processes configured across products for operating the business with SAP Software

Industry Reference Architecture
template solution for an architecture for a particular domain

Sample Data
sample master data and transactional data to showcase the business

SAP Software
SAP S/4HANA, SAP Hybris, SAP SuccessFactors, Industry Solutions
SAP Solution Manager Process Management
One Process Landscape for Business and IT

With SAP Solution Manager Process Management business and IT plan, manage, and operate processes in one common process landscape.

- **Process Management**
  - Web-based documentation experience
  - Multi-level process hierarchies
  - Integrated graphical process editor
  - Processes assembled from re-use libraries
  - Processes are tied, validated, and optimized continuously based on real usage

- **Integrated Process Experience**
  - Requirements Management integration
  - Change Management integration
  - IT Project and Portfolio Management integration
  - Test Suite integration
  - Business Process Monitoring integration
SAP Solution Manager allows to define document standards, by central definition of document types, their templates, allowed usages and completeness rules. The list is providing the minimum documentation standards and their typical usage:

- Process description
- Use case
- User guide (training material)
- Functional integration test case description
- Single functional test case description
- Functional specification
- Functional specification for enhancements
- Functional interface specification
- Technical specification
- Configuration guide
Requirement Management in Focused Build
Explore Phase

Create immediately requirements in Validation workshops with customers for delta identification (fit/gap analysis)

Requirements integration into process models with customer handover to build team

Multi-language support for requirements

The tight integration of the requirements with the solution landscape, process models, work packages, work items, solution documentation, and the solution readiness dashboard
Work Package & Work Items in Focused Build

Realization

Work Place for the Build Team

- SAP UI5 apps for work packages and work items
- Status and workflow based processes
- User specific inbox of work load
- Simplified documentation with DropDoc
- Templates for functional specifications, technical design documents, test cases, etc. to accelerate build projects
- In-place reporting on Solution Documentation status
- Tracking via the solution readiness dashboard with pre-defined KPIs and metrics.
- Tight integration in the WBS of Project Management with work packages, completeness, efforts, risks.
- Direct access to managed systems and transport requests
Transparent Requirements-to-Deploy
Agile Delivery Model for Focused Build

- Optional Dev tool Integration

Process meets Technology

Deployment with Focused Build

- Based on Standard functionality of Change Control Management
- Predefined Work Package / Item Workflows & Processes
- Provides link between requirements and implementation with full traceability
- Highly integrated in SAP Solution Manager scenarios (Project-, Test-, Release Management)

SAP’s Central Transport Management Infrastructure

- Full control & transparency over change execution
- Fully integrated transport mechanism and change control system to manage changes across technology stacks and application components
- Incorporates SAP’s best practices regarding transport management
- One source of truth to avoid and manage risks of application changes in a project
- Additional functions to increase consistency and minimize manual efforts
SAP Intelligent Enterprise Framework - Hybrid architectures

SAP S/4HANA
- S4D ABAP
- S4Q ABAP
- S4P ABAP

SAP HANA XSA
- XSD Non-ABAP
- XSQ Non-ABAP
- XSP Non-ABAP

SAP Cloud Platform
- DEV Account

- PRD Account

SAP Data Hub
- DEV Account
- QAS Account
- PRD Account
Example of Project Structure in Build Projects for agile approach
Project structure sample with 2 waves and 6 sprints
Test Management in Focused Build
Test Manager & Tester

- Automated Test plan generation
- Integration into WBS of Project Management
- Automated creation of test packages per Work Package and test assignment
- Test execution application
- Test defect and correction process workflow
- Test Step Designer to build test cases with direct links for execution
- Fully integrated with Standard Test Suite to enhance testing with standard features
Test Suite Analytics
Dashboard for Test Manager and Test Coordinators

Test Suite Dashboard

- Test Coordinator can assess multiple test plans in a fast and convenient fashion
- Status of open test executions and defects in graphical format
- Details in table format
- Test execution progress
- Test Coordinators can monitor defects created from test executions by priority and resolutions status
SAP Solution Manager - Test Suite

Overview

Test Suite covering both technical tests for code objects as well as functional tests at process level

Test Case Types

- Unit (UT) and Configuration Tests (CT)
- Single Functional Tests (SFT)
- Functional Integration Tests (FIT)
- User Acceptance Tests (UAT)
- Regression Tests (RT)

Roles:
Quality Manager, Release Manager, Test Coordinator, Tester, Developer, Functional Consultant and Business Users
SAP Solution Manager - Test Suite
Capabilities by Standard Test Suite and Focused Build

Focused Build for SAP Solution Manager

Test Suit related
- Requirements / Work Package based Test Plan Generation
- Exchange of assigned Testers to Test Packages
- Simplified Manual Test Execution
- Test Suite Dashboard

SAP Solution Manager – Test Suite

Solution Documentation
- Manual Test Cases
- Automated Test Cases
- Test Automation Framework with 3rd party test tool integration
- Test Composition Environment to manage SAP and partner tools
- Test Data Management

Change Impact Analysis
- Change Impact Analysis
- Test Plan and Test Package Management
- Test Execution of manual and automated tests
- Gap and Completeness Analytics
- Test Execution Analytics

Test Planning
Test System Setup
Test Execution and Analytics
SAP Solution Manager – Test Suite
A full-blown application for manual / automated testing and change impact analysis

Functional scope

- Manual and automated functional tests
- Automated change impact analysis of maintenance activities for test scope optimization of regression tests
- New requirements triggering semi-automated test planning for user acceptance tests and functional integration tests
- High degree of test automation possible
- Supports agile development approach within requirements-to-deploy process through Focused Build for SAP Solution Manager
- Seamlessly integrated with SAP Solution Manager Process Management, Solution Documentation, ChaRM, ITSM, …

SAP and non-SAP solutions

- SAP Business Suite
- SAP S/4HANA (on-premise, cloud edition)
- Non-SAP applications (on-premise, cloud)

Integration

- Test system refresh
- Partner: test data identification, validation and provisioning
- Partner: test automation tools

Single source of truth

- All related information in 1 central SAP Solution Manager system
- No complex data replications

The Test Suite of SAP Solution Manager 7.2 is a comprehensive test solution fitting the needs for the vast majority of SAP customers.
Release Management – Introduction

Release & Deployment Management is responsible to manage successful deployment of all related changes into a productive environment.

Release Management defines dates and schedule for Releases.

Release content determined by Projects and Work Packages or Requests for Changes and related Work Items or Change Documents.

Release Cycle as technical container and model for the release content.
Release Management
Synchronize projects and keep them under control

Reduce Risks, Simplify Go-Live Process, and Decrease Test Efforts
Agile methodology with Focused Build
External Tool API – Example Jira

Project Team
- **Requirements** defined in discovery workshops
- **Work Packages** created out of Requirements by Architect
- Work Packages broke down into **Work Items** by Architect

Development Team
- Work Package synced into Jira as **Epic**
- Work Item synced into Jira as **User Story** keeping correlation to Epic.
- **User Story** status synced back to Focused Build for tool integration.
- **Tasks** created by Scrum Team for detailed planning.

The Jira add-on is provided as open source. See https://github.com/SAP/solman-fb-jira-addon for details.
Focused Build offers an open API which allows vendors of digital ScrumBoards an integration in the R2D process to offer development teams a modern and intuitive user experience, allowing team members to perform tasks more concisely and considerably faster.

Integration allows:

- Synchronized information about WP&WIs, teams and status
- Support of intuitive user interface based on UI5 with drag-and-drop functionality
- Flexibly expandable and configurable interface
- Data maintenance revision-secure in the SAP back-end system
- Supports follow up integration, e.g. reference to transport requests
- Triggering of workflows, e.g. automatic notification of testers
- Any software vendor who has similar solutions can get in touch with SAP for an integration

The Picture shows an example of a ScrumBoard solution of bsc who has build a solution based on the API.
SAP Activate Implementation Methodology - Phases

1. **Prepare**
   - Initial planning and preparation for the project. In this phase, the project is started, plans are finalized, project team is assigned, and work is under way to start the project optimally.

2. **Explore**
   - Perform a fit/gap analysis to validate the solution functionality included in the project scope and to confirm that the business requirements can be satisfied. Identified gaps and configuration values are added to the backlog for use in the next phase.

3. **Realize**
   - Use a series of iterations to incrementally build and test an integrated business and system environment that is based on the business scenarios and process requirements identified in the previous phase. During this phase, data is loaded, adoption activities occur, and operations are planned.

4. **Deploy**
   - Setup the production system, confirm customer organization readiness, and to switch business operations to the new system.

5. **Run**
   - Run the new system; apply SAP operations standards to optimize system operation.
SAP Activate & SAP Solution Manager for on-premise

**Prepare**
- SAP Best Practices that fit customer scope
- Solution Scope and Value Determination
- Initial Roadmap and Approach
- Pre-Assembly

**Explore**
- Delta Design (create Work Package)
- Scope Work items/Sprint Plan
- Value based prioritization Product Backlog (requirements)
- Solution Validation including Gap Validation**
- Baseline Build (Sprint)

**Realize**
- Sprint Execution
- Integration Testing
- Value Audits
- Setup Operations or OCC**

**Deploy**
- Support after Go-Live
- Cutover
- Organizational and Production Readiness
- Technical and System testing

**Run**
- Value Management
- Application Lifecycle Management
- Operations Control Center

Jump-start project with pre-assembled solution
Identify & validate delta requirements and gaps
Build customer solution in short, time-boxed sprints
Safeguard build and run with ICC**, OCC** and MCC**

** Deliverables, milestones and activities are only applicable in SAP Premium Engagements.
The Advantages: Accelerating Delivery of Outcomes

Start with SAP's Rich Best Practices
Early available in the project!

- Import SAP BP processes and content (e.g. SAP Model Company)

Solution Validation instead of traditional Business Blueprint
Fit/Gap workshops with customer at the steerwheel to drive priorities

- Model Business processes
- Collect Requirements for each gap / WRICEF
- Build a Work package backlog

Agile Build
Tailor the solution in short time-boxed sprints with frequent inspection points by the customer

- Define Waves & Sprints
- Break Down Work in Work items and tasks
- Perform short iterations of dev, config & testing
Fit/Gap Workshops Approach

Workshop Type A
Solution Validation

1. Reference Value
- Provide Process, Value and Strategic Context
- Set Boundaries
- Tie to Business Case, Value Drivers

2. Validation of SAP Solution
- Show and tell SAP standard key design elements

3. GAP Identification
- Identify gaps to Standard
- Log additional scope items

4. Delta Scope Prioritization

Workshop Type B
Delta Design

Product Backlog

- Requirements
- Rank | Value | Effort
- 16 | 10 | 4
- 15 | 6 | 5
- 14 | 23 | 1
- 13 | 3 | 8

The Basics of Agile Methods

**ITERATIVE**
Frequent Inspection & Adoption

**PEOPLE CENTRIC**
Trust, Self-organizing teams and individuals

**FOCUS**
Team focuses on one thing at a time until it’s done

**CROSS-FUNCTIONAL TEAMS**
Face to face communication / no silos

**CONSTANT LEARNING**
Better fail early to learn fast, and improve

**ADAPTIVE PLANNING**
To hit a moving target
SCRUM Methodology – leading Agile approach
Enable Focused Build
Innogy streamlines the move to one digital core to continue driving innovation for customers and across the energy sector.

Taking advantage of SAP Solution Manager and the preconfigured Focused Build solution, Innogy is simplifying its move to SAP S/4HANA® through:

- Agile innovation development framework that includes tight collaboration – from requirement to deploy – between IT and business units
- Centralized application management, making it possible to keep all systems up to date
- Coaching with SAP Max Attention services on tool setup and enablement to help ensure proper usage and maximum performance
- Out-of-the-box and integrated tool-supported methodology to manage requirements and software development across the implementation project in an agile way
- Integrated documentation of business-processes and system solutions, providing an up-to-date documentation of the solution for handover at the end of each project phase
- Unified, real-time project data for on-demand status reports and traceable testing records – saving 2,000 hours of project work in one year
- 40% adherence to standardized business processes based on proven best practices

“The dashboards in SAP Solution Manager gave us real-time visibility into every aspect of our SAP S/4HANA project. It eliminates the need to collect weekly status data. This level of agility and effort reduction will continue to help us as we embark on additional parallel rollouts.”

Arno Hagmans, Head of Systems and Processes, Innogy SE
How KWS SAAT turns into an Intelligent Enterprise with Focused Build for SAP Solution Manager 7.2
“The dashboards in SAP Solution Manager gave us real-time visibility into every aspect of our SAP S/4HANA project. They eliminate the need to collect weekly status data. This level of agility and effort reduction will help us as we embark on more parallel rollouts.”

Arno Hagmans, Head of Systems and Processes, Innogy SE

“You can use Focused Build NOW OR you need 1,5 years to implement an individual tailored R2D process to support your specific agile development project”

Johannes Hurst, Director, SNP (SI for AUDI & VW S/4HANA transformations)

“The reasons for us to select Focused Build were.
• Support efficient delivery of S/4 Hana implementation project
• Drive simplification and automation in our operations
• Short term readiness of tool and necessary functionality”

Frank Brandes, Global Head ERP Digital Core & Integration Platform, ROCHE

“Focused Build for SAP Solution Manager 7.2 fulfills all the needs to control the plan, build and test phases in an integrated way. This is the best way to introduce a clear method for a SAP project to the Haribo world.”

Stéphane Schmuck, Solution Manager Officer & Test Manager, Haribo GmbH & Co KG

“Focused Build for SAP Solution Manager is accelerating our SAP S/4HANA Project with Real Time Access to project status and dashboard reporting and increased Visibility and communication between different teams and to upper management”

Zurich American Insurance

“First time in SAP, a Greenfield implementation with 300+ developments of SAP S/4HANA via SAP Solution Manager 7.2” accomplished in less than a year.

Delivery Head, BOSCH

“Reuse of process links reduces a lot of effort and any duplication. End to end traceability with audit trails and automated work flows”

Vijay Mathur – Assistant Manager (P2P), Adani Wilmar Limited

*recorded from public presentations at events
Quotes* from Focused Build customers & partners II

“Focused Build shall be trained to the whole project team by dedicated key users. I would integrate the need to use Focused Build in any RFP for an SAP S/4HANA project.”

Nils Tölle, Project Lead Program PROGRESS, AUDI AG

“The motivation to implement Focused Build in SAP Solution Manager 7.2 is based on 4 major reasons: TCO reduction; Standardization; Usability improvement; Agile work methodology.”

Marcel Schori, Solution Architect, BKW Energie AG (CH)

“SolMan 7.2 offers new, extended and integrated features, beyond the standard ALM functionalities. Focused Build is an Add-on for Solution Manager 7.2 and offers new possibilities in the area of agile project management (methodology & templates) and supports the whole IT lifecycle from “Requirement to Deploy”…”

Christos Mitos, Global Head ERP Digital Core & Integration Platform, Post CH

“Solution Documentation in SAP Solution Manager is our required single source of truth” and give us the chance to rule the complexity of our business processes.”

Katharina Leuze, SAP consultant, WÜRTH IT

“The Focused Build Dashboards from SAP allows us the traceability from requirement until the test coverage. The target process documentation is the central access point for the collaboration between Business and IT.

Dr. Uwe Karrer, BMW

“Solman is the unthanked hero of the landscape! It is a beautiful thing if you put the work upfront in it. We got extraordinary results from SAP Solution Manager telling us what we have to test-riskbased, which enhancements of business process has to be touched, etc.”

Gabriela Azzali VP Orica at SAP MaxAttention Summit, Oct 19.

“I could not imagine to do such a huge SAP S/4HANA transformation project without Focused Build.”

Estefania Barres – Project tool lead, MERCADONA

“I knew SAP Solution Manager from the past and was not convinced if it could help us in the project. But after I learned about Focused Build, I had to admit that there is no better alternative tool available for mid- and large-sized implementation projects…”

Torsten Hübsch, Director SAP Practice, PriceWaterhouseCooper

Agile Implementation Methodology with SAP Solution Manager
Service offerings for Focused Build from SAP

1 – day Service

Agile S/4HANA implementation with SAP Solution Manager 7.2 and Focused Build

- One day onsite workshop supported by many system demos
- Standards for project plan and process modeling
- Activate content and model companies as accelerators
- Delta scoping and requirements gathering
- Agile implementation
- Automated Tracking

- Turnkey methodology and tools with out of the box training.
- Understand SAP’s best practices for S/4 implementations
- Decision and planning support on implementation methodology and tool set.

Coaching Service

Agile Methodology and Tool Coach

- Central point of contact for all topics around implementation methodology
- Coordinates all configuration activities around Focused Build and connected systems.
- Plans and executes all training activities.
- Quality Checks to safeguard the usage of Focused Build in SAP Solution Manager.
- Single point of contact for all queries and issues for Focused Build and SAP Solution Manager
Install a Methodology & Tool coach

It is strongly recommended to enable a Methodology and Tool coach if you plan to use the Focused Build - Requirements to Deploy- process.

Focused Build coaches are provided from either SAP Service Delivery (PE customers) or from a Focused Solution Circle member.

Typical tasks of a methodology and tool coach are

– Support in defining the implementation concept aligned with SAP Solution Manager, SAP Activate, SAP Model Company, and SAP Value Assurance services
– Explain the tasks, benefits, and key deliverables in each phase and the integration with SAP Activate
– Act as a central contact and key user guide and explain the users in their different roles the Focused Build processes in projects
– Being able to support projects in the tool administration and master data maintenance for the Focused Build processes
– Orchestrate required technical tasks to get setup services, technical support, etc.
– Being your contact to SAP as part of a Focused Build community with regular exchange of experiences with other FB experts and SAP Backbone.
Prerequisites for Focused Build service consumption

System prerequisites
- SAP Solution Manager 7.2 landscape (at least DEV and PRD) with add-on ST-OST installed. (See SAP note 2541761 for release information.)

Configuration Prerequisites
- The basic configuration for dedicated scenarios is completed. In detail the below Guided Procedures (GPs) in SOLMAN_SETUP are completed.
  - Part 1: GPs in section Cross Scenario Configuration -> Mandatory Configuration
  - Part 2: GP Test Suite Preparation (in section Test Suite)
  - Part 3: Certain steps in section Change Control Management:
    - Mandatory steps in GP ‘Change Request Management’
    - GP ‘Managed System’ Setup for all project-relevant satellite systems (e.g. S/4HANA landscape) and the simulation landscape connected to the development or sandbox Solution Manager system.
- Users with required roles, authorizations and business partners according to Focused Build security guide.

Configuring systems to meet the prerequisites is not part of the Agile Methodology and Tool Coach service. Support possible via service SAP Solution Manager consulting packs.
Experienced Service Providers for Focused Build

Local partners or SAP consulting support you in setting up your focused solution, provide knowledge transfer, and assist you in managing the project.

New functionalities in SAP Solution Manager 7.2 and Focused Build ST-OST200

To find out about new developments in SAP Solution Manager 7.2, please visit the SAP Help Portal for release notes or SAP Support Portal for presentations.

For the Requirement to Deploy process running with Focused Build, there are new functionalities shipped with SAP Solution Manager stack and in ST-OST 200. You should check both areas for news.

https://help.sap.com/solutionmanager72
https://help.sap.com/FBUILD

Focused Build: Central Note for Focused Build 2.0 for SAP Solution Manager 7.2.: 2624412
(Please read through it. It does contain valuable information.)

Focused Build: Please always check latest Technical collective note. E.g for SP2: 2624462 (should be implemented automatically)

The Support Packages of ST-OST 200 are always related to SAP Solution Manager 7.2 stack. Please make sure that you install only the support packages that are fitting to each other, as described in the central note. !!!
Knowledge Transfer and Demos
of SAP Solution Manager

https://support.sap.com/ → Application Lifecycle Management → SAP Solution Manager → Knowledge Transfer Demos

SAP offers an integrated SAP Solution Manager demo landscape for the entire SAP ecosystem: customers, SAP partners and SAP employees.

If you are searching for opportunities to learn more about SAP Solution Manager features or to demonstrate functionalities to other people, if you want to play video-like demos or work in a real system for demonstration purposes or if you need a private system for a proof of concept, then your search ends here!

Knowledge Transfer and Demos provides a comprehensive demo library, a demo system available 24x7 and the opportunity to get this preconfigured system in the private cloud. In the following three sections you will find more details.
Demo System Landscape
for SAP Solution Manager (including Focused Build !)

You are searching demo material for various SAP Solution Manager functionalities and features?
- Navigate through a virtual demo environment at your own pace
- Discover new functionality of SAP Solution Manager 7.2
- Practice when and as often as you want
- Free trial unlimited, without any additional costs.

You want to play with a pre-configured public demo system?
- Use the Internet Demo System to play with SAP-provided data on a pre-configured public demo system in the internet.
- Experience a fully-configured SAP Solution Manager 7.2 including Focused Build and Focused Insights.
- Understand how SAP Solution Manager 7.2 interacts with SAP S/4HANA.
- Free trial unlimited, without any additional costs.
- Regular system refresh, system governed by SAP.

You want to experience SAP Solution Manager in private cloud?
- Use the SAP Cloud Appliance Library (SAP CAL) a pre-configured private demo system in the cloud.
- Test the content activation before executing the upgrade to 7.2.
- Prepare and explore the transition to SAP S/4HANA and transfer results to your SAP Solution Manager.
- Get a 30-day free trial. In addition, you need a cloud provider account (Amazon Web Services (AWS) or Microsoft Azure).
- No system refresh, system governed by yourself.
**Media Center** provides demo and info material in three different sections:

- **Introduction**
  All news about SAP Solution Manager will be shown here. This content is focused on **Management Competence** (such as level 0 or level 1).

- **Key Value Chains**
  Here you will find all demos based on Key Value Chains (aligned with ITIL). This end-to-end demo content is primarily focused on **Core Competence**.

- **Functional Areas**
  SAP Solution Manager can be structured into different scenarios and functionalities. The sub structure of this section is aligned with the SAP Solution Manager LaunchPad framework and is focused on **Expert Competence**.
The Internet Demo System

- is a pre-configured demo system in public cloud
- can be reached by everybody
- is concurrently used by multiple people
- is refreshed by SAP on a regular basis
- can be directly accessed via [SAP Solution Manager LaunchPad](Direct Link to SAP Solution Manager LaunchPad)
SAP Cloud Appliance Library (SAP CAL) … provides an online repository of the latest, pre-configured SAP solutions that can be instantly consumed in the cloud. It is for all customers that want to operate in own private environment with their own data and own demo system to get hands-on experience of SAP Solution Manager 7.2.

Available SAP Solution Manager solutions in SAP CAL:

- **SAP Solution Manager 7.2 SP07 & Focused Solutions SP02 (Demo System) with SAP S/4HANA**
  This system contains a configured SAP Solution Manager 7.2 SP07 (incl. Focused Build and Focused Insights 2.0 SP02) and a SAP S/4 HANA system. Customers can experience the new functionality of SAP Solution Manager 7.2 and get insights on how the management platform supports the transition to SAP S/4 HANA. It even includes the turn-key solution of Focused Build which makes implementation projects with SAP Solution Manager fast and cost-effective.

- **Focused Build SP03 for SAP Solution Manager 7.2**
  This system contains a configured SAP Solution Manager 7.2 SP08 with Focused Build SP03. SAP Solution Manager 7.2 covers the complete application lifecycle of your IT solution running on premise, hybrid or in the cloud. The modern and intelligent IT management platform empowers your IT organization for the future of business. Focused Build offers out-of-the-box, fully integrated, tool-supported processes and methodology to manage requirements and software development in large, agile innovation projects.

- **SAP Solution Manager 7.2 SP05 New Unconfigured Installation**
  This unconfigured appliance enables customers and SAP partners to practice the entire SAP Solution Manager configuration process on a newly created system.
Experience SAP Solution Manager 7.2 on Cloud with SAP CAL

Test-drive for a nominal fee in your own private cloud with personalization

SAP CAL – Your highway to SAP Solution Manager 7.2 success!

SAP Solution Manager 7.2 incl. Focused Build solutions are now available in the SAP Cloud Appliance Library (CAL).

SAP provides the powerful appliance without SAP CAL charges. Customers and partners only need an Amazon Web Services (AWS) account to test drive the SAP Solution Manager cloud appliance for as a free trial.*

*Cloud provider infrastructure fees apply.
Get a First Hands-on Tool Experience
Explore Focused Build in the SAP Cloud Appliance Library (CAL)

Use cases of SAP Cloud Appliance Library (CAL)
- Get a first hands-on tool experience in a trial environment
  - Deploy a preconfigured Focused Build scenario in SAP Solution Manager 7.2 in a hosted environment (e.g. AWS).
  - Usage for trial purposes is free of charge.
  - The CAL image includes an SAP internal license for SAP Solution Manager which is valid for 30 days.
- The CAL solution even includes a connected SAP S/4 HANA system, which allows the trial of an integrated requirement-to-deploy process
- Be aware that you would need an own hosting account, e.g. at Amazon Web Service.

- Click here to deploy Focused Build in the CAL NOW!

Also use the CAL to jumpstart your SAP Solution Manager 7.2 and SAP S/4 HANA project!
Training

Agile Project Delivery with Focused Build for SAP Solution Manager

Targets:

- Overview about the Focused Build process and its functionalities along the project lifecycle.
- How to use the standardized best practice tasks of Focused Build in an SAP S/4HANA implementation project
- How to use Focused Build to train the project members in their different roles before starting an implementation project

Target roles:

- Project members who use Focused Build
- Project Managers who decide to use Focused Build as implementation tool
- Agile methodologists and tool consultants

Focused Build for SAP Solution Manager

Targets:

- Explain the core elements of Focused Build.
- Understand the phases and results of each phase.
- Explain the relation to the SAP’s implementation methodology SAP Activate.
- Use the integrated tool chain and to explain the Focused Build processes in projects.
- Plan the use of Focused Build in agile implementation projects.

Target roles:

- Project Manager, IT Management
- Requirement Manager, IT Architect
